

Product Requirement Document

Monologg Beta Launch (Phase 1 PWA)

Document Version: 1.4.0
Target Delivery: Q3 2026
Audience: Lead UI/UX Designer / Product Design Team
System Engine: Google Antigravity (Design-to-Code Framework)

1 What is Monologg? (A Definition for the Designer)

To design Monologg, you must understand the fragmentation we are solving. Monologg is the world's first **brief-to-booking pipeline** built specifically for the performing arts and creator economy.

Think of Monologg as a high-performance transactional hybrid of three major industry paradigms:

IMDbPro (The Registry)	Upwork (The Marketplace)	Stan / Linktree (The Storefront)
Verified Talent Database, credits, media and professional credentials.	Secure Escrow transactions, messaging, milestone contracts.	1-Click Purchase, high conversion, integrated booking bio links.

MONOLOGG
A Unified Brief-to-Booking Pipeline

- **The Problem:** Currently, creators lose up to 20%+ of their income to agents and intermediaries, while clients spend weeks sifting through static portfolios with no way to instantly coordinate schedules or lock contract payments.
- **The Monologg Solution:** We connect talents directly to casting leads, brand agencies, and event coordinators. Through an integrated scheduling engine (resembling Calendly) and a transactional escrow drawer, we shrink the hiring process from weeks to 3 simple clicks.

2 Dynamic Audience Strategy: "The Core 4" & Extended Creators

The platform must balance immediate market penetration with limitless category scaling. Your designs must prioritize our **primary launch beachhead** while using flexible, welcoming terminology that naturally embraces **extended performing creators**.

2.1 The Core Four Target (Our Primary Focus)

We are capturing the global Performing Arts market starting with four primary niches:

1. **Actors:** Focused on sharing monologue reels and securing film/TV audition bookings.
2. **Comedians:** Focused on sharing live show sets and corporate stand-up bookings.
3. **Voice-Over (VO) Artists:** Focused on sharing voice demos and remote studio sessions.
4. **Comperes:** Focused on sharing hosting reels and securing live event emcee bookings.

2.2 The Extended Creators (Inclusive, Non-Alienating Architecture)

Monologg is highly adaptable. Performative talents of all backgrounds — such as **Pastors/Public Speakers, Musicians, Content Creators, and Streamers** — will use Monologg to distribute booking links and coordinate appearance fees.

UX Rule for the Designer: Do not use hyper-specific casting jargon that alienates these extended creators.

- Instead of “Add Cast Role Title”, use “Add Booking Service Title”.
- Instead of “Upload Audition Tape”, use “Upload Performance/Showcase Reel”.
- Ensure category grids, filter pills, and profile fields are dynamic, adapting gracefully based on the creator’s chosen niche.

3 Brand System & Landing Page Scope

3.1 Brand Identity Autonomy (Work Package 1)

As the Lead Designer, you have **absolute creative freedom** to define Monologg’s visual system, colors, type systems, and personality.

- Establish a brand that feels elite, cinematic, and professional enough for executive producers at studios like Netflix, HBO, or Disney, while remaining fresh and accessible for modern digital creators.
- Deliver a structured design tokens panel in Figma featuring primary/secondary background values, high-contrast action states, and custom typography variables.

3.2 Evergreen Landing Website (Work Package 2)

The marketing website must be designed as an **Evergreen layout**. The entire core layout remains identical, utilizing a toggleable hero module to swap states seamlessly without requiring an engineering rebuild post-launch:

- **State A: Pre-Launch (Waitlist Mode Active):** Features an interactive email entry widget. On click, the widget transitions inline to show their place in the queue: *“You are Number #{XYZ} in the Verification Queue. Share your link to climb the roster.”*
- **State B: Live App (Post-Launch Active):** The email input box is hidden. Two prominent call-to-actions take its place:
 - **Primary CTA:** “Post a Project / Find Talent” (routes to Directory Feed).
 - **Secondary CTA:** “Launch Your Storefront” (routes to Creator Onboarding).

4 Comprehensive User Stories & Specifications

Each user story represents a specific, functional artboard state that you must design in Figma. Use these as a checklist to ensure every view is fully accounted for in your work estimates.

4.1 Talent Onboarding & Storefront Pathway (Creator Experience)

US-1.0: Personalized, Adaptive Registration Roster

As an onboarding Creative Professional (whether I am an Actor, Pastor, VO Artist, or Live Streamer),
I want to select my primary performative niche during registration,
So that my profile set-up, media upload limits, and pricing cards adapt to fit my specific craft.

Acceptance Criteria & Visual Rules:

- Displays a clean choice: "I am Talent" vs "I am looking to Hire".
- Selection interface features visual grids for: *Actor, Voice-Over Artiste, Comedian/Com-pere, Speaker/Pastor, Musician, Content Creator/Streamer*.
- The interface updates dynamically based on the selection (e.g., if "Voice-Over Artiste" is selected, the media upload frame shifts to prioritize audio formats like .mp3/.wav instead of default video uploads).

US-2.0: Background Thespian AI & Quasi-KYC Verification

As an onboarding Creative Professional,
I want to drop my primary showreel or performance clip into the platform,
So that Monologg's background engine (Thespian AI) can securely analyze my clip, perform automated KYC, and auto-tag my style without forcing me through long tag lists.

Acceptance Criteria & Visual Rules:

- Design an interactive file upload component with clear drag-and-drop feedback supporting video and audio files (Max 150MB).
- Show a highly polished processing state where a skeleton loader pulses. Microcopy reads: *"Thespian AI is reviewing performance parameters for quasi-KYC registration..."*
- Show the success state: displays a clean **Verified Badge** [Verified] alongside dynamic, auto-generated tags (e.g., Warm Texture, Conversational Vibe, Expressive).

US-3.0: High-Converting Storefront Rate Cards

As an independent Creative Professional,
I want to set up modular rate cards listing my core booking services and base fees,
So that clients can buy my services directly from my link-in-bio page without long email negotiations.

Acceptance Criteria & Visual Rules:

- Design an interactive settings form where creators add: *Service Title, Base Price (\$), and Delivery Timeline.*
- Design a public-facing profile that displays these rates as clean, vertically-stacked actionable cards matching the look of high-converting bio stores like Stan.

US-4.0: Live Availability Scheduling (Calendly System)

As an active Creative Professional,
I want to synchronize my availability calendar and set operational booking hours,
So that clients can view my open slots and secure my calendar blocks immediately.

Acceptance Criteria & Visual Rules:

- Settings screen where talents click specific days and select active hour slots (Calendly-style sync).
- Displays calendar date indicators showing how date selections open specific time slots in a clean mobile drawer.

4.2 Clients & Casting Directors Pathway (Employer Experience)**US-5.0: Simplified Project Brief Creation**

As a casting lead, brand coordinator, or church admin,
I want to quickly outline a project brief, attach scripts, and set my escrow budget,
So that matching creators on the platform are curated and notified immediately.

Acceptance Criteria & Visual Rules:

- Clean layout containing: *Project Name/Type, Niche requirements, Script/Asset file upload area, and Budget scale slider.*

US-6.0: Filter-Driven Talent Discovery Directory

As a hiring Client,

I want to browse available talent rosters and filter them by both primary category and Thespian AI vibe tags,

So that I can find the perfect performer for my target script or audience.

Acceptance Criteria & Visual Rules:

- Search field with intuitive filter tags displaying: *Core Focus (Actors, VO, Comedians, Comperes), Extended Focus (Pastors, Musicians, Streamers), Thespian Vibe tags (Warm Tone, Dramatic, High Energy), Pricing, and Location.*

US-7.0: Transparent Checkout & Escrow Gateway (FINCRA System)

As a hiring Client ready to secure a booking,

I want to select my booking date/time slot and complete payment through a secure escrow gateway,

So that my funds are safely locked until the creator delivers the project guidelines.

Acceptance Criteria & Visual Rules:

- Layout must display an escrow hold breakdown showing how fees are handled:
 - *Talent View:* Base rate showing a 9% engine deduction on complete delivery.
 - *Client View:* Checkout page showing a 12% escrow processing fee added to the base rate.
- Modern FINCRA-aligned checkout drawer featuring credit/debit card input fields and secure bank routing options.
- Security reassurance: display an escrow holding notification to guarantee financial safety for both parties.

US-8.0: Collaborative Order Room & Transaction Timeline Tracker

As a transacting Creator or Client,

I want to access a unified communication room with a prominent escrow progress bar,

So that we can share scripts, coordinate details, and track project completion with total transparency.

Acceptance Criteria & Visual Rules:

- Displays a 3-step timeline indicator anchored to the top of the interface:

[Escrow Locked] → [Deliverables Provided] → [Payment Released]

- Features standard chat bubbles, in-chat voice players, document attachments, and platform system notifications.

5 Google Antigravity Layout Guidelines (Design-to-Code)

To enable Google's Antigravity system to parse your Figma designs and compile them directly into code, you must adhere to these rigid structural standards:

1. **Auto-Layout Mandate:** Every card, form, header, navigation item, and list container must use Figma Auto-Layout. Groupings and floating vector shapes are strictly prohibited as they break compilation.
2. **Standardized Naming Style:** Avoid layers named *Frame 1024* or *Vector 2*. Name your layouts semantically to match development terms:
 - Action triggers: btn-primary, btn-disabled, btn-outline-hover.
 - Cards: card-creator-storefront, card-niche-select, card-fincra-payment.
 - Live Indicators: badge-thespian-verified, badge-processing.
3. **Fluid Design Tokens:** Maintain clean variables for padding, borders, gaps, and corner radiuses (4px to 12px maxima) to ensure responsive scaling across mobile viewports.

6 Project Scope Artboard Scoping Table

You can use the list below to estimate your workflow hours, construct your project schedule, and prepare your design invoice.

Figma Page	Viewport	Code	Screen Name / Interface Target State
Page 1: Tokens	System-Wide	SYS-01	Core Brand Systems, Icons, Type scale, & Variables Token board
Page 2: Portal	Desktop (1440px)	WEB-01	Public Landing Page (Waitlist State Toggle Active)
	Mobile (375px)	WEB-02	Public Landing Page (Waitlist State Toggle Active)
	Desktop (1440px)	WEB-03	Live Portal State (Launch Storefront / Active Directory access active)
Page 3: Beta PWA (Creator Flow)	Mobile-First	PWA-01	Welcome, Register & Sign-up sheet
	Mobile-First	PWA-02	Dynamic Selection: Core 4 & Extended Niche Selection Board
	Mobile-First	PWA-03	Drag-and-Drop Video / Audio Media Showcase Intake Panel
	Mobile-First	PWA-04	Thespian AI: Passive upload analysis loading state
	Mobile-First	PWA-05	AI Analysis Complete: dynamic profile tags and verified badge screen
	Mobile-First	PWA-06	Rate Card Creation Settings page
	Mobile-First	PWA-07	Public Storefront Profile View (Stan/Link style rate list)
	Desktop (1440px)	PWA-07D	Public Storefront Profile View (Desktop viewport adaptive card)

	Mobile-First	PWA-08	Scheduling dashboard (Set weekly hours and sync status)
<i>(Client Flow)</i>	Mobile-First	PWA-09	Client Project Setup form
	Mobile-First	PWA-10	Casting Directory Feed (List of Verified Creators and tag filters)
	Desktop (1440px)	PWA-10D	Casting Directory Feed (Desktop viewport adaptive list layout)
	Mobile-First	PWA-11	Calendar slot configuration checkout sheet
	Mobile-First	PWA-12	FINCRA Payment Gateway & Escrow Deposit overlay screen
	Mobile-First	PWA-13	Unified Chat Order Room (with top Escrow Milestone progress bar)
